

Rational Performance tester v7.0 Course Content:35-40hours

Course Outline

Upon completion of the course, you will be able to:

Recall performance testing basics and document your plan for performance testing using a Workload Analysis Document

Explore a training application (system under test) and exercise it in conjunction with Rational Performance Tester

- Use Rational Performance Tester to
-
- Create, run, and modify performance tests
-
- Manage test data using datapools and data correlation
-
- Enhance tests with verification points, loops, and custom code
-
- Design and enhance workload scenarios and schedules
-
- Monitor test execution and analyze results
-
- HTTP Basics
-
- Performance testing overview
-
- Workload analysis and user community modeling
-
- Introduction to RPT
-
- Record and Playback (script Level)
-
- Settings --- Record and Playback

-
- Enhancing Scripts
-
- Parametrizing script
-
- Data Correlation
-
- Creating Schedules
-
- Exercises – On Accompanying Projects
-
- Enhancing Schedules
-
- Ramping Up tests
-
- Analyzing Results
-
- Performance Test monitoring
-
- Exercises – On Accompanying Projects
-
- Testing process and testing concepts
-
- Introduction to Performance Testing
-
- Recording and playing back tests
-
- Datapools and data correlation
